

MOSES MANDRAJU

Java Full Stack Developer (Backend-Focused)

Phone: +91 9885988015 Email: mosesmusician77@gmail.com Location: Hyderabad, India

Portfolio: moses-mandraju.github.io LinkedIn: linkedin.com/in/moses-m

Profile Summary

Full Stack Developer with 3.6+ years of experience, specializing in backend microservices and API integration using Java and Spring Boot. Strong expertise in Core Java, multithreading, JPA/Hibernate, and asynchronous messaging with IBM MQ and Apache Pulsar, along with secure API development using Apigee API Gateway (OAuth, HMAC, 2-way SSL, 42Crunch). Proven ability to optimize back-end performance, reducing API response times through parallel processing and database optimization. Experienced in working across multiple systems to support IPv4/IPv6 dual-stack enablement, coordinating with upstream and downstream teams to ensure seamless adoption, with additional experience in React, JavaScript, Linux, CI/CD pipelines, and production debugging.

Technical Skills

- **Backend:** Java, Spring Boot, Microservices, REST APIs, Multithreading, Schedulers
- **Integration & Messaging:** Apigee API Gateway, IBM MQ, Apache Pulsar
- **Security:** OAuth, HMAC, 2-way SSL, 42Crunch, OWASP
- **Tools & Platforms:** MySQL, Linux, GitLab, Jenkins, SonarQube
- **Frontend:** React, JavaScript, HTML, CSS

Work Experience

Infosys Limited

Java Full Stack Developer

July 2022 - Present

- Optimized latency-critical microservices by introducing asynchronous execution and database optimizations, reducing API response time from **700ms to 300ms**.
- Implemented **10+ Apigee API proxies** exposing **45+ endpoints**, achieving **90%+ success rates** across UAT and Production environments.
- Collaborated with **5+ third-party teams** to understand cross-functional workflows and integrate complex upstream and downstream requirements.
- Orchestrated the delivery of **9+ complex backend features**, including API integrations, consistently completed on or ahead of committed ETAs within a fast-paced Agile environment.
- Recognized as a **Platinum Club Member** for consistent high performance.

Projects Handled

IVAPP - Enterprise API & Integration Platform

Client: Verizon

Role: Java Full Stack Developer

Skills used: Java, Spring Boot, Microservices, MySQL, Apigee

Tools used: Spring Tool Suite, Git Bash, Sonar Lint, SonarQube, Linux

Description: IVAPP is a mission-critical enterprise integration application that acts as a central communication hub between multiple upstream and downstream systems at Verizon. Orchestrates secure synchronous REST APIs and asynchronous messaging workflows, ensuring reliable, compliant data exchange across interconnected applications.

Key Contributions / Feature Streams

Core Microservices & System Orchestration

- Improved latency-critical microservice endpoints by improving concurrent request handling, resolving N+1 database query issues, and migrating REST calls to the Web Client, reducing API response time significantly.

- Developed Spring Boot-based microservices to orchestrate inter-system communication, handling both JSON and XML request/response formats.
- Handled data persistence logic to store external service responses in PostgreSQL, mapping complex nested payloads into normalized relational structures.
- Enhanced throughput and responsiveness by optimizing downstream call orchestration and backend configurations for high-traffic flows.
- Diagnosed and resolved complex issues in Linux-based UAT environments, including API timeouts, payload mismatches, and header/encoding problems.
- Worked together with client-side and downstream application teams to analyze requirements, validate payload contracts, and adapt to evolving schemas across systems.

Platform Modernization & Asynchronous Messaging Integration

- Modernized legacy microservices by upgrading applications from Spring Boot 1.x to Spring Boot 3.x, adapting configurations, security settings, and dependencies for Java 17.
- Re-architected backend workflows to support asynchronous processing using IBM MQ, implementing producers, listeners, retry mechanisms, DLQs, and message tracking.
- Integrated Apache Pulsar topics to enable secure, event-driven communication between services, including encrypted topic configurations.
- Refined code maintainability and reuse by refactoring duplicated logic into shared service and utility components.
- Ensured high code quality and security compliance by resolving SonarQube critical and blocker issues and aligning implementations with OWASP guidelines.

API Gateway Engineering & Enterprise Security (Apigee)

- Analyzed integration requirements with onshore stakeholders and reviewed third-party API specifications to design secure and scalable integration flows.
- Designed backend Spring Boot services to process, transform, and route external platform responses.
- Created and deployed Apigee API proxies to abstract backend microservices, enabling centralized gateway-level traffic management.
- Enforced API security using OAuth, HMAC authentication, 2-way SSL, IP whitelisting, quota, and spike arrest policies.
- Performed 42Crunch security scans on OpenAPI/Swagger definitions and remediated identified vulnerabilities to meet enterprise compliance standards.
- Troubleshoot and resolved gateway-level issues including proxy routing failures, SSL handshake errors, and request validation problems.
- Prepared API security and architecture documentation to support internal audits and compliance reviews.

Education

Bachelor of Technology (B.Tech)

Sir C R Reddy College of Engineering, Eluru

2018 – 2022

GPA: 8.0 / 10.0

Languages

- **English:** Proficient
- **Telugu:** Native
- **Hindi:** Beginner
